ARCHITHA CHILUVOJU

Full-Stack Developer | Software Engineer

Location: Hyderabad, Telangana, India **Phone:** +91-6281285042 **Email:** architha108@gmail.com LinkedIn

Career Objective

To be apart of a progressive organization that helps in building my career and my knowledge and utilizing my skills towards the growth of the organization.

Professional Summary

- Dedicated software engineer with **3 years of comprehensive experience in full-stack development using modern technologies**.
- Specialized in building scalable web applications with **Java Spring Boot, React, and database integration**.
- Proven track record in developing enterprise-level systems including role-based access control, document management, and applicant tracking systems.
- Strong analytical and problem-solving skills with expertise in UI/UX design, API development, and system architecture.
- Passionate about creating efficient, user-friendly solutions and collaborating effectively in agile development environments.

Technical Skills

Programming Languages:

Java, JavaScript, Python, SQL, HTML5, CSS3

Frontend Technologies:

React.js, React Hooks, React Query, React Table, React Hook Form, JavaScript ES6+, HTML5, CSS3

Backend Technologies:

Java Spring Boot, Spring Security, RESTful APIs, Microservices, JWT Authentication, Node.js, PostgreSQL

Tools & Technologies:

Git, Maven,JavaMailSender, Zod Validation, OTP Authentication, File Upload APIs

IDE & Tools:

VS Code,Intellij IDEA

API Development & Tools

Rest APIs,Postman,Swagger

Certifications

- JavaScript, HTML, CSS - Duke University
- Python Programming - University of Michigan
- AI Tools & Productivity Certification - Completed practical training on modern AI tools (Be10x).
- Season 13: Building 100% Postgres Compatible AI Applications with Google Cloud Google Developer Groups (GDG) Cloud Kochi – Code Vipassana.

Education

Bachelor of Technology - Information Technology

Jawaharlal Nehru Technological University, Hyderabad

Graduated: July 2021

Professional Experience

Software Developer *October 2022 - September 2025*

Ada Insys Private Ltd, Hyderabad, India

BLARC - Business Logic & Role-based Access Control System

Description : Enterprise application for managing business logic, users, roles, permissions, and secure access across multiple modules.

- Designed and implemented Role-Based Access Control system with Spring Boot, Spring Security, and JWT for secure user access management.Integrated secure OTP Authentication System validating login via username, password, and OTP with robust security
- Built comprehensive Petition Management System enabling users to submit role and permission requests with admin approval workflow and audit tracking
- Engineered Document Management System replacing external services with internal APIs for secure document upload, update, and storage
- Developed Event and Notification Management System for event scheduling, visitor invitations, recurring events, and automated email notifications. Built Node.js microservices for communication workflows including WhatsApp, Phone Calls, SMS, Zoom, and Google Meet integrations

Environment/ Applications Used: Spring Boot, React.js, React Query, React Table, MySQL

RFP - Request for Proposal Management System

Description : Platform to manage the complete RFP lifecycle from creation to evaluation with approval workflows.

- Developed comprehensive RFP management platform handling proposal lifecycle from creation to evaluation
- Implemented multi-level approval hierarchies and document management with version control
- Built custom document storage system replacing third-party services, reducing costs by 60%
- Designed secure authentication infrastructure with OTP-based login and multi-factor authentication
- Created automated notification system for RFP submission deadlines and stakeholder communications

Environment/ Applications Used: Spring Boot, React.js, React Query, React Table, PostgresSQL

ATS - Applicant Tracking System

Description: Platform to manage the complete RFP lifecycle from creation to evaluation with approval workflows.

- Built sophisticated candidate management system handling job postings, applications, and evaluation workflows
- Developed CandidatePipeline with configurable stages from application to final placement
- Implemented intelligent resume parser extracting structured information from various document formats
- Created team collaboration features with user invitation system and role-based access controls
- Built automated notification scheduler for candidate and hiring manager communications

Environment/ Applications Used: Spring Boot, React.js, React Query, React Table, PostgresSQL

Additional Projects

- **Digital College Magazine Platform:** Comprehensive platform for student content sharing with content management system
- **Computer Vision Object Detection:** Implemented object detection system using Python and YOLO v3 algorithm
- **College Event Management System:** Web application for event tracking with real-time communication features
- **Competitive Programming:** Achieved verified medals on HackerRank platform and participated in ML workshops
